## To save more lives, we're mapping all defibrillators in the UK.

It is estimated that tens-of-thousands of defibrillators are still unknown to ambulance services in the UK, making them less likely to be used in the event of an emergency.

Register yours on The Circuit – the national defibrillator network and give your defibrillator its best chance at saving a life.

**Register on The Circuit today.**

# Register your defibrillator now and help save more lives

The Circuit's primary aim is to locate and register the UK's thousands of defibrillators. This data is shared dynamically with the ambulance services so they can direct bystanders to the nearest defibrillator in an emergency.

## This is where your defibrillator comes in.

Buying a defibrillator is the first step towards helping to save more lives. Once registered on The Circuit, you'll receive direct reminders when something needs to be done, such as a check-in or pad replacement, to ensure your defibrillator is always emergency-ready.

## How do I register?

Scan the QR code to go straight to registration

- 1 Visit [thecircuit.uk](https://thecircuit.uk)
- 2 Set up your account
- 3 Register your defibrillator
- 4 You're all done!

### Information to have to hand

The location and surroundings of your defibrillator

The brand, model and device serial number

When the defibrillator is accessible

When the pads expire and if it is emergency ready
